PROFESSIONAL SUMMARY

Senior SDET with 4+ years of experience in enterprise quality engineering, specializing in IBM Sterling OMS, supply chain workflows, and test automation. Experienced in Java/BDD automation, Playwright-based framework development, and API and backend integration validation. Automated 70% of regression test cases, reduced regression execution cycles by 30%, and supported quality validation across 200+ global partner integrations. Building on core quality engineering practices with AI-assisted testing and multi-agent orchestration.

CORE TECHNICAL SKILLS

Enterprise domain: IBM Sterling OMS; Supply Chain Management (order, catalog, inventory, fulfillment); partner integrations
Automation: Java; Selenium; Cucumber BDD; Playwright; JavaScript; JUnit/TestNG; Gradle
API & backend validation: REST API testing; Postman; GraphQL; Elasticsearch log validation; SQL
CI/CD & delivery: Jenkins; GitHub Actions; Git; Agile; regression strategy; defect triage; root-cause analysis
AI-assisted engineering: Agentic test authoring; multi-agent orchestration; intelligent healing; predictive failure analysis
Testing: Functional; regression; integration; API; performance; end-to-end and log validation

PROFESSIONAL EXPERIENCE

Senior Quality Analyst
Jan 2025 – Present

Infosys Limited

- Automated 70% of regression test cases using BDD (Cucumber, Java and Selenium), reducing regression execution cycles by 30% and freeing approximately two sprint cycles per quarter for exploratory testing.
- Designed and executed end-to-end SCM validation for order creation, allocation, shipment and returns in IBM Sterling OMS.
- Validated API contracts with Postman and order-lifecycle log integrity with Elasticsearch to improve early defect detection across critical events.
- Integrated the BDD automation suite into Jenkins and Gradle CI/CD pipelines to support continuous regression on each build.
- Led knowledge-transfer sessions for QA engineers, developers and solution architects to support onboarding and shared domain understanding.

Quality Engineer
Aug 2021 – Dec 2024

Infosys Limited

- Performed performance validation of critical SCM workflows, including inventory synchronization and bulk order processing, identifying bottlenecks before production rollout.
- Collaborated with developers and product owners to define Gherkin acceptance criteria, improving requirement clarity and helping reduce defect leakage across sprints.
- Drove root-cause analysis for recurring defects through cross-functional triage, contributing to faster resolution and improved sprint quality.
- Participated in Agile ceremonies to align quality validation with sprint scope and delivery commitments.

SELECTED ENGINEERING INITIATIVES

North Star — Playwright + JavaScript AI Test Framework

- Designed and built an internal Playwright and JavaScript end-to-end framework to validate order processing across Integrator, IBM Integration Bus (IIB), Omnihub, Tibco, WMS and SAP.
- Architected a five-agent orchestration layer: Planner for coverage analysis, Generator for test authoring, Healer for selector repair, Predictor for failure forecasting, and Coordinator for multi-system execution synchronization.
- Reduced the end-to-end testing timeline from approximately six weeks to one–two weeks through parallel execution and intelligent healing; framework is progressing through production enablement.

Adiscom — Social Commerce Channel Integrations

- Owned end-to-end quality engineering for three major social commerce channel integrations, contributing to approximately $1M in annual revenue from newly onboarded partner platforms.
- Designed BDD automation scenarios for integration workflows, reducing manual testing effort by 40% and improving coverage of edge-case flows.

Global Partner Program (GPP)

- Validated end-to-end SCM flows across 200+ global partner integrations, covering Ship from Warehouse (SFDC), Ship from Store (SFS), Ship to Home (STH), Pick-Up & Drop-Off (PUDO), and eCommerce order types.
- Built BDD automation for high-volume regression scenarios and collaborated with regional QA teams across WE, US, SEA, JP and IN to validate localized workflows.
- Performed defect triage and root-cause analysis to support reliable regional rollouts.

EDUCATION, CERTIFICATIONS & AWARDS

Bachelor of Technology (B.Tech) — National Institute of Technology, Hamirpur (NITH) | 2021 | CGPA: 8.8

Certifications: SDET (Software Development Engineer in Test); Digital Supply Chain Professional; Cloud Professional; Digital Assurance Professional.

Awards: RISE Insta Awards, Infosys; RISE Unit Award — “Tech Domain Maestro,” Infosys.

Language: English
